

Magnets Lesson – Teacher Notes

- The video has an introduction followed by a demo of magnetic poles.
- This could be supplemented by having a pair of fridge magnets and seeing if they attract or repel when different sides are close together.
- If the fridge magnets have a disc magnet in this might come out.
- A worksheet will follow this – it is introduced in the video

- Then there is a chance to make a compass
- There is an introduction and a visual guide to how to make it
- There is an accompanying instruction sheet with a couple of slightly more advanced questions.
- Most mobile phones have a compass app so you can determine which way is north and see if the home-made compasses point in the correct direction
